

Customizable

Thanks to the properties of the materials we use, our R&D department can adapt the measures and the shape of the pallet meeting the various needs of storage and handling. You can also decide the color and print your logo.

100% Recyclable

Our products are made of Polypropylene, a material which can be regenerated. After their life time, the pallets are recycled as raw material with respect of the environment.

Hygienic and resistant to insects and termites

The Polypropylene we use in our products is an organic material resistant to mold, bacteria and fungi. It is easy to clean and sanitize.

Tested

The mechanical characteristics and resistance to loads are tested in our laboratories.

Moisture resistant

Our products are extremely resistant to moisture.

Weather resistant

Our products are weather resistant and stand up well to extreme temperature changes. They can be stored outside for long periods without alteration.

Resistant to chemical agents

Our products do not alter in contact with chemicals.

Light

Our products are extremely light thanks to the honeycomb structure of molded polypropylene.

No maintenance required

Contrary to the traditional wooden pallets, our products do not need any maintenance.

Long Life

Our pallets are twenty times longer-lasting than the traditional wooden pallet.

N.B. Static and dynamic load tests have been performed with uniformly distributed weight. We recommend that you always check the conditions of loading and storage of pallets, taking into consideration environmental factors such as the storage time, the temperature of the storage area. Our research and development department is at your disposal for further testing. GEKOPLAST S.A. reserves the right to modify the technical characteristics described above at any time.
